Artificial Turf Maintenance

Guidelines

WAVE OUTDOORS

Although artificial turf is much less maintenance than normal turfgrass, there are still some suggestions to keep your turf in tip-top shape. Following these simple steps can help your turf looking good while extending the life and performance of your turf.

Clear Debris

- Weekly: leaf blower or rake.
- Monthly: hard-bristle broom (non-metal).

Wash

- Weekly: Light washing to clear of dust and debris.
- Monthly: deep spray.

Pups and Poops

- Pickup debris as usual (baggie or scooper) and hose down immediately after usage.
- Weekly rinsing with cleansing deodorizers to help reduce odors and improve cleanliness.
- Spray / apply an artificial turf safe deodorizer such as BioTurf, SCOE 10X, Odormute, Odoban, and other similar products.

Turf Appearance

- Apart from cleanliness, the turf has a natural grain direction. To maintain the upright appearance, brush your lawn encourages the grass blades to stay upright. Use a broom or a handled brush (non-metal) to groom against the grain.

Life's Messes

- Artificial turf is naturally stain-resistant.
- Tougher stains: use mild soap with water and scrub (or water and equal parts vinegar).

Avoid!

- Cigarettes, charcoal embers, fireworks, fire, and other heat producing items.
- Oils, grease, motor oil (and keep lawn equipment away from these substances!).
- Sunflower seeds, chewing gum, or tobacco products.

Snow

- Best option: brush / sweep snow away or let melt naturally.
- Heavy snow: shovel just the top layers, then brush the remaining away.
- Be mindful of turf seams / edges by careful shoveling of adjacent patios and sidewalks.
- Shovels: plastic or rubberized blades.
- Salt: not recommended.
